

AC generator	Produces alternating current
Battery	Provides current to operate electrical components
Charge indicator	Provides a path for current flow to the rotor
Drive belt	Drives the alternator at engine speed
Ignition switch	Provides voltage from the battery to the alternator
Rectifying diodes	Changes alternating current to direct current
Voltage regulator	Regulates the alternator current
Wiring loom	Carries electrical current to components

Print laminate and cut out for a matching the charging system components to what they do activity
