

Battery	To provide electrical energy to operate the starter motor
Starter switch	Provides a path for current to flow to the starter solenoid (operates the starter motor)
Solenoid	Magnetic switch that moves the pinion into mesh with the flywheel and provides a path for current to flow from the battery to the armature
Field coils	Produces a strong magnetic field to act against the magnetic field created in the armature to make the armature turn.

Print, laminate and cut out for a matching the function with the starter circuit component activity
