

Hydrometer	This is a measure of the number of minutes a fully charged battery can deliver at a discharge rate of 25amps
Voltmeter	A device used to preserve the vehicles electronic settings, such as radio, ECU settings.
Reserve capacity	A battery that never needs water to be added
Cold cranking	A unit that contains a 12 volt energy pack and jumper leads that can be used to jump start a vehicle
Memory save	This is a measure of the discharge current in amps a battery can supply in a low temperature environment
Trickle charge	A battery that needs very little water added over its life. Has removable vents should top up be needed
Portable starting pack	Tool used to determine the state of charge in a battery
Maintenance free	Recharges the battery at a low ampere rate over a long period of time (16 hours)
Low maintenance	A syringe type tool used to measure the specific gravity of electrolyte

Print, laminate and cut out for a matching the words with the descriptions
