

<b>Regulator and flow meter</b>
<b>Wire feed unit</b>
<b>Hand gun</b>

<b>Reduces the high cylinder pressure to a usable pressure and is able to adjust and measure the gas flow required</b>
<b>When the handgun switch is depressed, the feed rollers pull the wire from the spool through the rollers into the centre of the lead. The lead allows the wire to feed down the neck of the handgun and out to the nozzle tip</b>
<b>Allows the user to aim the wire directly at the weld joint, and for the user to aim the gas flow directly at the weld joint. Houses the wire feed motor switch which controls wire feed, gas flow and current flow.</b>
