

Tasks

Safety Precautions

Working with airbags	Do not create a crash condition which would cause the devices to activate
Working with fuel systems	Avoid naked flames, depressurize the EFI system before disconnecting, to avoid fuel spraying onto the engine
Working with flammable materials	Make sure there are no ignition sources close by such as welding sparks or naked flames
Working with high voltage ignition systems	Take care not to touch high voltage circuits on running engines as there is a danger of electrocution
Working with components under tension (coil springs)	Use the correct clamping device. Do not use air tools to tighten clamps. Do not lean over components under tension
Working with batteries	Wear personal protection gear, avoid shorting terminals. Avoid contact with electrolyte.
Working with hot components	Wear suitable protective gloves
Working with lifting and supporting equipment eg hoist, axle stands, jack	Use the jacking points on the vehicle correctly
Working with hydraulic and pneumatic systems	Check for oil or air leaks and use correct pressure

Print, laminate and cut out for matching the task with the safety precautions activity
